

SAVE TIME, SEED, AND MONEY!

If you want to reduce the proportion of Poa Annuua in your sward composition, simply overseed with your desired species using the Dyna-Seeder units. They produce healthy vigorous new growth, whilst also economising on seed.

The vibrating spikes produce thousands of holes for the seed to lodge and germinate

in. The seed is precisely metered out onto the green at the most economical application rate and pushed into the ground by the rotating spikes. They can sow pure bent as low as 5g per metre, accurately and without wind drift.

Your members will notice the excellent germination and fresh growth on your greens!

Other units in the DYNAMICS range...

DYNA-CORER

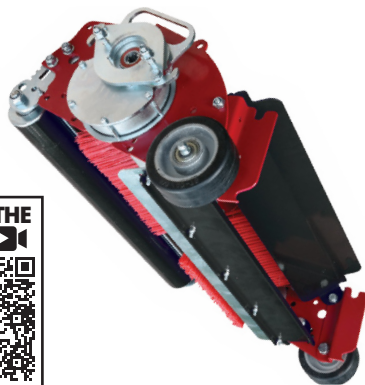

Fast micro-coring using your triplex

The Dyna-Corer units relieve surface sealing and compaction, and enable air and water to reach the root zone. They are so quick and clean that the members will hardly notice it being done.

The Dyna-Corer's micro tines effectively remove thousands of tiny core plugs. An ideal thatch control or pre-seeding treatment. The coring depth can be precisely adjusted down to a maximum of 25mm.

DYNA-BRUSH

Contra-rotating brush units

The Dyna-Brush units are ideal for quickly clearing the micro-cores from the Dyna-Corers. Used together, they enable you to core and clean up your greens with absolutely minimal disruption to play. The brushes rotate the opposite way to the direction of travel which gives them far superior performance for cleaning out debris from within the turf surface, and stimulates a healthy erect sward.

DYNA-SPIKER

Powered vibra-spiker units

Similar to a Sarel Roller, but utilising a patented powered vibration principle, the Dyna-Spiker drives its slitting spikes deeper into the root zone. When golf greens become hard in summer drought conditions, the Dyna-Spiker's vibratory spiking action is the solution, powering its spikes through the hard surface and deep into the root zone to enable irrigation, wetting agent or fertiliser to penetrate.
